## PROFESSIONAL EXPERIENCE

**Visiting Assistant Professor**, Northwestern University

2022–present

Department of Engineering Science and Applied Mathematics (ESAM)

- Collaboration with the main developers of the **Dedalus project**: Daniel Lecoanet, Geoff Vasil, Keaton Burns.
- Analysis of different instances of the tau spectral method. In particular, investigation of the qualitative and quantitative properties of the approximate spectrum of two eigenvalues problems with fluid dynamics applications.
- Seminars and talks at several international conferences in Europe and in the US.
- Instructor for six classes of the Northwestern multivariate integral calculus course for engineering students.
- End of the appointment: August 2024

**Ph.D. Research Engineer**, EDF (main French electric company)

2018–2022

R&D Division Lab Paris-Saclay

- Development of a posteriori error estimation applied to mechanical problems modeled with PDEs, and introduction of a fully adaptive algorithm including stopping criteria for the nonlinear solver and automatic tuning of some parameters. Implementation with **FreeFem++**.
- Development of models for the materials and their cohesive zones, both from a theoretical point of view, and with the creation of tailored FEA tools for the industry. Implementation with Python, Fortran and the numerical simulation tool **code\_aster**.
- Collaboration between different divisions (also outside R&D) in order to provide customer-focused solutions to the final users. This taught me how to be autonomous, organized and willing to interact and work closely with diverse audiences.
- Presentation of the results in several international conferences in Europe.
